

I am an XM subscriber since December 2003. I chose to subscribe to XM for a multitude of reasons including comprehensive music, news such as the BBC, and the freedom of listening to programming not being censored. I am disheartened with the amount of involvement with the FCC in general. I now understand that NAB is lobbying for the support to cease weather, and traffic information being broadcast by XM. This is ridiculous. I am against what NAB is advocating for and think that XM radio should be able to provide traffic and local information's pertinent to the communities that they serve. I am against this lobbying effort and think that XM and other should be able to provide weather and other city by city programming.
